

Zi Yang

Web3 Frontend Engineer

✉ yz186337@gmail.com | 🌐 zyang.space | 🐙 github.com/zyzy98

Summary

Frontend-focused Web3 Engineer with 3+ years of experience building React, Next.js, and TypeScript applications for DeFi and on-chain data products. Experienced in wallet-connected interfaces, transaction lifecycle handling, smart contract integration, and GraphQL-based indexed data pipelines. Strong ownership in taking products from architecture and implementation to production-ready user experiences.

Experience

Freelance

Suzhou, China

Web3 Frontend & Fullstack Developer

Jan. 2024 - Present

- Independently shipped IntentSwap, a DeFi application with wallet-connected trading-like flows, on-chain execution, and near real-time indexed data updates.
- Built an on-chain event indexing pipeline using Subsquid Pipes and PostgreSQL, exposing structured blockchain data via GraphQL APIs for frontend consumption.
- Designed frontend data flows to synchronize wallet state, transaction lifecycle, indexed contract events, and off-chain monitoring.
- Implemented transaction flows using Wagmi and Viem, including contract reads/writes, execution states, and user-facing status handling.
- Debugged frontend and indexing inconsistencies by tracing wallet transactions, contract events, and GraphQL responses.
- Integrated Solidity smart contracts using Hardhat and collaborated across frontend, backend, and contract layers.

Ecovacs

Suzhou, China

Software Engineer

Jan. 2022 - Dec. 2023

- Developed interactive 3D web applications using Vue.js and Three.js.
- Built reusable and responsive frontend components based on design specifications.
- Optimized rendering performance to improve load times and user experience.
- Contributed to frontend architecture and code maintainability.

Education

The University of Queensland

Master of Information Technology

Brisbane, Australia

Jul. 2019 - Dec. 2021

Soochow University

Bachelor

Suzhou, China

Sep. 2013 - Jun. 2017

Projects

IntentSwap

- Built an intent-based DeFi application with conditional execution logic driven by on-chain events.
- Indexed contract events including IntentCreated, Executed, and Cancelled to maintain consistent off-chain state.
- Persisted indexed data in PostgreSQL and exposed via GraphQL APIs.
- Enabled near real-time frontend updates based on indexed blockchain events and transaction status changes.
- Implemented wallet connection, contract interaction, and user-facing transaction lifecycle handling.
- **Tech:** Next.js, TypeScript, Wagmi, Viem, Solidity, Hardhat, Subsquid Pipes, PostgreSQL, GraphQL, Hono, Drizzle ORM

YouTube Comments Chat

- Transformed YouTube comments into real-time interactive chats, improving engagement during full-screen video playback.
- Implemented login flow and subscription-based feature access.
- **Tech:** TypeScript, React

Nextjs-Paddle SaaS Starter

- Built a starter-ready SaaS boilerplate with landing page, billing integration, and dashboard to accelerate product development.
- Integrated subscription billing and application scaffolding for faster production launches.
- **Tech:** Next.js, React, Drizzle ORM, tRPC, Paddle API, TailwindCSS
